

Tutorial 1: One-Click Image Optimization

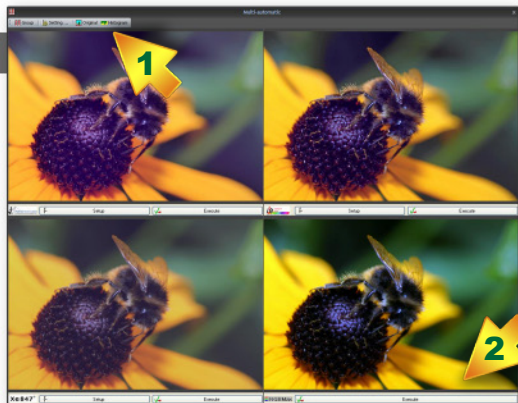

STEP 1

► Open picture in PhotoPerfect

First select a folder on your computer system which contains images (1). The images in the folder are then displayed in the form of preview images in the Thumbnail View (2). Now simply drag an image from the thumbnail view to the Workbench (3).

STEP 2

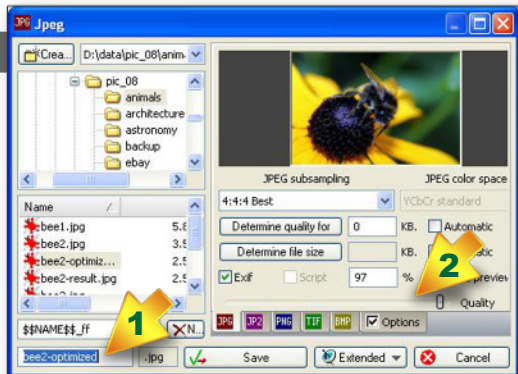

► Press "D" for preview screen

You see the results of the four different One-Click optimization plugins. Some of them may contain watermarks and have to be purchased separately on the PhotoPerfect website.

By clicking on the button named "original" (1) you can toggle between viewing your original picture and the optimized ones.

Click on the "Execute" button of the result you like best (2).

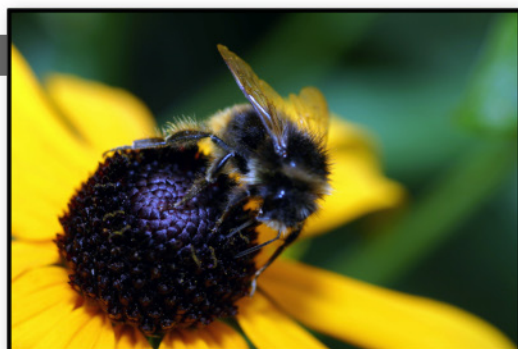

STEP 3

► Save optimized picture with "File / Save as..." dialogue

The "Save As" Dialogue seems to be a bit overwhelming in the beginning but is quite straightforward after a closer look. Just enter the new file-name in the box in the lower left corner (1). If necessary you can adapt the quality of the new picture with the "Quality Slider" (2).

RESULT

► Fullscreen view of the result

Press F6 to view the result in full screen mode. The result proves that with a few simple steps the average looking picture has been dramatically improved.
